

Interactive fishing and hunting map

An updated, online interactive map that provides valuable information on all aspects of fishing and hunting adventures in the Mountain State is now accessible on smartphones and tablets. Instructions for using the interactive map can be found at mapwv.gov/huntfish/ where outdoor enthusiasts can choose to explore information about hunting and fishing.

The map also has a variety of tools and clickable elements with additional information. Anglers may check on fishing information, including fishing and boating access sites, trout-stocked streams, public fishing lakes and float trips. A tool allows users to measure the length of a stream section they wish to float. An option allows users to search for a specific body of water, county or area surrounding a city or state park.

The interactive map also features tools for hunters, who may use it to find the location of public shooting ranges, wildlife management areas and Class Q hunter access roads.

An Internet or cellular data connection is required to access the interactive map, but a PDF can be printed or downloaded and used on a mobile device when offline.
